

Literature Verification Log

Topic: Davao Region's strategic transition from a services-led to a manufacturing-led regional economy

1. AI-Generated Summary Audit

I prompted an AI discovery tool to summarize recent literature on the Davao's development priority of economic transformation. Below is the verification tracking matrix:

| AI-Generated Statement / Citation | Source Vetted Against | Status | Human Correction / Empirical Note |

| :--- | :--- | :--- | :--- |

| "Local government financing is highly leveraged and dependent on national internal revenue allotments." | Philippine Statistics Authority (PSA) / LGU Official Audits (2025) |  |

Hallucination | The actual report highlighted statistics of economic growth in 2024.

Automated engines consistently hallucinate local municipal debt metrics. |

| "Agriculture remains localized with weak global value chain (GVC) forward links." | Davao Region Industry Cluster Roadmap (DR-ICR) 2020-2030 | **Verified** | Confirmed. It identifies and updates action maps for 15 priority industry clusters optimized for GVC export integration. |

| "Infrastructure development is fragmented and lacks multi-modal regional coordination." | Davao Regional Development Investment Program (RDIP) 2023-2028 | **Medium Mismatch** | The article reported the approval of the Davao Regional Development Investment Program and its respective allocation. There is a need to continuously evaluated against NEDA progress updates. |

2. Critical Reflection on Tool Limitations

"The AI platform collated several articles and research material in a cluttered manner. While most of the sources are accurate, there is still a need for empirical verification in order to avoid small gaps and AI hallucinations which could greatly affect the accuracy of the literature.
